SYLLABUS-GROUNDED LEARNING

Master A/L ICT with Precision and Clarity

The comprehensive platform for Advanced Level students to excel in Information & Communication Technology. Access structured lessons, practice real-world coding, and join a community of scholars.

Get Started → Login to Portal

Unit-wise content Exam-style quizzes

How it works

Four simple steps to transform your ICT knowledge from theory to mastery.

1. Sign up

Create your academic profile to track your syllabus progress.

2. Pick a unit

Choose from Database Systems, Networking, or Programming units.

3. Ask or Discuss

Engage with peers and tutors to clarify complex ICT concepts.

4. Practise & review

Take timed quizzes and review past papers with detailed marking schemes.

WHY THIS PLATFORM

Designed for Academic Excellence

Unlike generic tutorials, our platform is built specifically for the A/L ICT curriculum requirements, ensuring every minute you spend is relevant to your exams.

Explore all features →

Syllabus-based answers

All answers are verified against the national curriculum guidelines.

Unit or whole syllabus

Study deep into specific modules or take a full-scale mock exam.

MCQ · Structured · Essay

Practice every question format found in the national papers.

Track weak topics

Our AI identifies areas where you need more focus and practice.

For students

Join thousands of students who are already using our platform to boost their ICT grades.

Register as Student

For teachers

Manage your classes, assign quizzes, and monitor student progress in real-time.

Request Teacher Access

Safe & Private

We prioritize student data privacy and maintain a secure environment for all users.

Smart Suggestion
This looks like Unit 4 material. Would you like to restrict search to this unit? Switch Scope

Student: What is 2NF and how is it different from 1NF?

SENT 10:24 AM

AI Tutor Assistant Verified

Tutor Answer

Second Normal Form (2NF) is a stage in database normalization that builds upon 1NF. To be in 2NF, a table must:

- Be in First Normal Form (1NF).
- Have no **partial dependencies**, meaning every non-prime attribute must depend on the whole of every candidate key, not just a part of it.

Unit 4 › 4.2 Unit 4 › 4.3

Simpler Example SI / EN

REASONS FOR FEEDBACK:
• Wrong • Unclear • Too long

Discuss check question

"If a table has a single-attribute primary key and is in 1NF, can it have partial dependencies?"

Your answer...

Submit Answer

4. ASK YOUR QUESTION

Type your question here... (e.g., How does 2NF apply to a student enrollment table?)

Detailed Question Review

Show Incorrect Only | Filter By Unit

Q4 – Structured

Unit 4 › 4.2

Explain the concept of Second Normal Form (2NF) with reference to partial functional dependency.

YOUR ANSWER

2NF is about removing partial dependencies. A table is in 2NF if it is in 1NF and all non-key attributes are fully functionally dependent on the primary key.

MODEL ANSWER

A relation is in 2NF if and only if it is in 1NF and every non-prime attribute is fully functionally dependent on any candidate key of the relation.

AI Feedback & Marks

Excellent understanding. You correctly identified the core principle of removing partial dependency. In the future, explicitly define 'full functional dependency' for a perfect score.

Part (a): 2/2 Part (b): 1.5/2

Agree Disagree Report REASONS: Unclear Wrong mark

Q7 – MCQ

Unit 5 › 5.3

Which layer of the OSI model is responsible for logical addressing and routing?

YOUR ANSWER

Data Link Layer (Layer 2)

MODEL ANSWER

Network Layer (Layer 3)

AI Feedback & Marks

Logical addressing (IP) and routing occur at the Network Layer. Data Link layer handles physical addressing (MAC).

Agree Disagree Report REASONS: Unclear Wrong mark

Q: Define 2NF

UNIT 4 MCQ

Which of the following conditions must be met for a table to be in Second Normal Form (2NF)?

YOUR ANSWER

It must have no transitive dependencies.

CORRECT ANSWER

It must be in 1NF and have no partial functional dependencies.

EXPLANATION

2NF specifically addresses partial dependencies on a composite primary key. Transitive dependencies are handled in 3NF.

Mark as revised

Ask tutor Similar Qs

Q: TCP vs UDP

UNIT 3 Structured

Differentiate between TCP and UDP based on connection reliability and overhead.

YOUR ANSWER

UDP is reliable but has high overhead.

CORRECT ANSWER

TCP is connection-oriented and reliable; UDP is connectionless and has lower overhead.

EXPLANATION

TCP uses a three-way handshake and error checking which increases overhead. UDP prioritizes speed over reliability.

Mark as revised

Ask tutor Similar Qs

Q: Normalization Logic

UNIT 4 Essay

Discuss the impact of many-to-many relationships in a relational database and how to resolve them.

YOUR ANSWER

They should be left as they are to save storage space.

CORRECT ANSWER

They must be resolved using an associative/bridge table to ensure 1NF compliance.

EXPLANATION

Direct M:M relationships cause data redundancy and update anomalies. A junction table decomposes them into two 1:M relationships.
